

Making a website for your car project one option.

- Go to weebly.com
- Create a free account
- 1 person in your group create a free website
 - (use the top option that ends the web address in “.weebly.com”)
- Go to settings tab → Click on editors on the left side
- Click on “+ editors” button on the right side
- Add each person in your group as Admin (you need their e-mail address to do this.)
 - Once you have added them, they need to go to their e-mail and accept the invitation
- **Publish your website ←VERY IMPORTANT STEP!!!!**
- **DID I MENTION THE ABOVE STEP IS VERY IMPORTANT????? BECAUSE IT IS!!**
- Documentation (**WEBSITE**) (**TYPED UP**). Up to 40% total. (purpose; set-up, data, and calculations; analysis of the results and the physics involved; Things that should be included → Pictures / Movies of different stages of lab, Works Cited). Add a page for (Purpose, Set Up, Data, Calculations, Revised car with a breakdown of how and why you changed the car the way you did, Analysis and Results, Citation Page, Pictures / Movies, Team Introductions, Other pages that make sense to have)
- List the author(s) of each page. (YOUR names)
- Only 1 editor can work on a page at a time. So divide up the work.
- On each page add a title, and start adding the elements for things that will go on to the page.
- Upload videos to Youtube.

You need make a google document, include names of car engineers and periods they have Physics, include the link to your website. And upload document to Google class folder
