# Fundamentals of Circuits

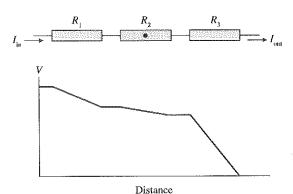

# 31.1 Circuit Elements and Diagrams

#### 31.2 Kirchhoff's Laws and the Basic Circuit

1. The tip of a flashlight bulb is touching the top of a 3 V battery. Does the bulb light? Why or why not?

- 2. Current  $I_{\rm in}$  flows into three resistors connected together one after the other. The graph shows the value of the potential as a function of distance.
  - a. Is  $I_{\rm out}$  greater than, less than, or equal to  $I_{\rm in}$ ? Explain.

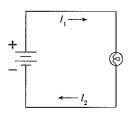

b. Rank in order, from largest to smallest, the three resistances  $R_1$ ,  $R_2$ , and  $R_3$ .

Order:

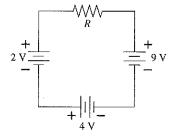

Explanation:

c. Is there an electric field at the point inside  $R_2$  that is marked with a dot? If so, in which direction does it point? If not, why not?

3. A flashlight bulb is connected to a battery and is glowing. Is current  $I_2$  greater than, less than, or equal to current  $I_1$ ? Explain.

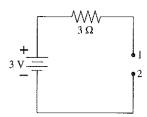

4. a. In which direction does current flow through resistor R?

b. Which end of R is more positive? Explain.

- c. If this circuit were analyzed in a clockwise direction, what numerical value would you assign to  $\Delta V_{\rm res}$ ? Why?
- d. What value would  $\Delta V_{\text{res}}$  have if the circuit were analyzed in a counterclockwise direction?

5. The wire is broken on the right side of this circuit. What is the potential difference  $\Delta V_{12}$  between points 1 and 2? Explain.

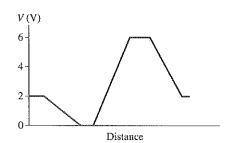

6. Draw a circuit for which the Kirchhoff loop law equation is

$$6V - I \cdot 2\Omega + 3V - I \cdot 4\Omega = 0$$

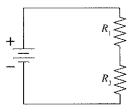

Assume that the analysis is done in a clockwise direction.

7. The current in a circuit is 2.0 A. The graph shows how the potential changes when going around the circuit in a clockwise direction, starting from the lower left corner. Draw the circuit diagram.

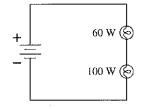

# 31.3 Energy and Power

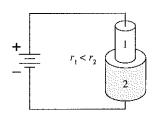

8. This circuit has two resistors, with  $R_1 > R_2$ . Which of the two resistors dissipates the larger amount of power? Explain.

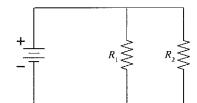

9. A 60 W lightbulb and a 100 W lightbulb are placed one after the other in a circuit. The battery's emf is large enough that both bulbs are glowing. Which one glows more brightly? Explain.

10. Two conductors of equal lengths are connected to a battery by ideal wires. The conductors are made of the same material but have different radii. Which of the two conductors dissipates the larger amount of power? Explain.

11. The circuit shown has a battery and two resistors, with  $R_1 > R_2$ . Which of the two resistors dissipates the larger amount of power? Explain your reasoning.

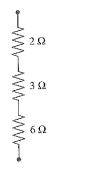

#### 31.4 Series Resistors

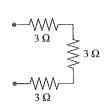

#### 31.5 Real Batteries

12. What is the equivalent resistance of each group of resistors?

a.

b.

c.

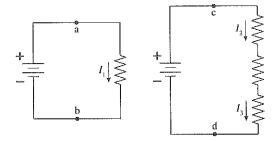

$$R_{\rm eq} =$$

$$R_{\rm eq} =$$

$$R_{\rm eq} = \dots$$

- 13. The figure shows two circuits. The two ideal batteries are identical and the four resistors all have exactly the same resistance.
  - a. Is  $\Delta V_{\rm ab}$  larger than, smaller than, or equal to  $\Delta V_{\rm cd}$ ? Explain.

b. Rank in order, from largest to smallest, the currents  $I_1$ ,  $I_2$ , and  $I_3$ .

Order:

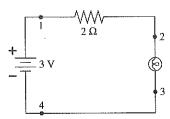

Explanation:

- 14. The lightbulb in this circuit has a resistance of  $1\Omega$ .
  - a. What are the values of:

$$\Delta V_{12}$$
 \_\_\_\_\_

$$\Delta V_{23}$$
 .....

$$\Delta V_{34}$$
 ......

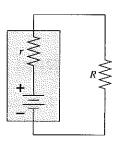

b. Suppose the bulb is now removed from its socket. Then what are the values of:

$$\Delta V_{12}$$

$$\Delta V_{23}$$

$$\Delta V_{34}$$

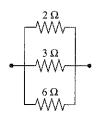

15. If the value of R is increased, does  $\Delta V_{\text{bat}}$  increase, decrease, or stay the same? Explain.

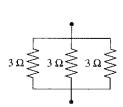

### 31.6 Parallel Resistors

16. What is the equivalent resistance of each group of resistors?

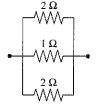

a.

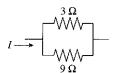

b.

¢,

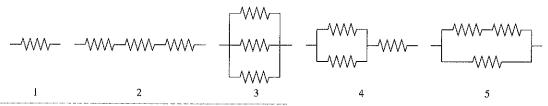

17. a. What fraction of current I goes through the 3  $\Omega$  resistor?

b. If the  $9\Omega$  resistor is replaced with a larger resistor, will the fraction of current going through the

 $3 \Omega$  resistor increase, decrease, or stay the same?

18. The figure shows five combinations of identical resistors. Rank in order, from largest to smallest, the equivalent resistances  $(R_{eq})_1$  to  $(R_{eq})_5$ .

Order:

Explanation:

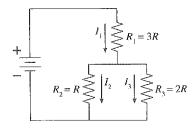

#### 31.7 Resistor Circuits

# 31.8 Getting Grounded

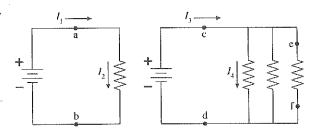

19. Rank in order, from largest to smallest, the three currents  $I_1$  to  $I_3$ .

Order:

Explanation:

- 20. The two ideal batteries are identical and the four resistors all have exactly the same resistance.
  - a. Compare  $\Delta V_{\rm ab}$ ,  $\Delta V_{\rm cd}$ , and  $\Delta V_{\rm ef}$ . Are they all the same? If not, rank them in decreasing order. Explain your reasoning.

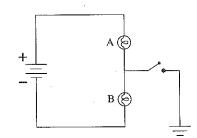

b. Rank in order, from largest to smallest, the five currents  $I_1$  to  $I_5$ .

Order:

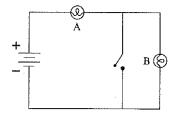

Explanation:

21. Bulbs A and B are identical and initially both are glowing. Then the switch is closed. What happens to each bulb? Does its brightness increase, stay the same, decrease, or go out? Explain.

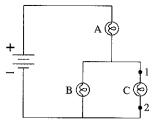

Exercises 22-25: Assume that all wires are ideal (zero resistance) and that all batteries are ideal (constant potential difference).

22. Initially bulbs A and B are glowing. Then the switch is closed, What happens to each bulb? Does it get brighter, stay the same, get dimmer, or go out? Explain your reasoning.

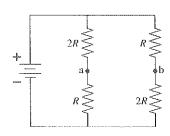

23. a. Bulbs A, B, and C are identical. Rank in order, from most to least, the

brightnesses of the three bulbs. Order: Explanation:

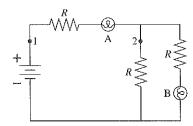

b. Suppose a wire is connected between points 1 and 2. What happens to each bulb? Does it get brighter, stay the same, get dimmer, or go out? Explain.

24. a. Consider the points a and b. Is the potential difference  $\Delta V_{ab} = 0$ ? If so, why? If not, which point is more positive?

b. If a wire is connected between points a and b, does a current flow through it? If so, in which direction—to the right or to the left? Explain.

- 25. Bulbs A and B are identical. Initially both are glowing.
  - a. Bulb A is removed from its socket. What happens to bulb B? Does it get brighter, stay the same, get dimmer, or go out? Explain.

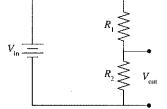

b. Bulb A is replaced. Bulb B is then removed from its socket. What happens to bulb A? Does it get brighter, stay the same, get dimmer, or go out? Explain.

c. The circuit is restored to its initial condition. A wire is then connected between points 1 and 2. What happens to the brightness of each bulb?

television.

- 26. Real circuits frequently have a need to reduce a voltage to a
- PSS smaller value. This is done with a *voltage-divider circuit* such 31.1 as the one shown here. We've shown the input voltage  $V_{\rm in}$  as a battery, but in practice, it might be a voltage signal produced by

a. Is this a series or a parallel circuit?

some other circuit, such as the receiver circuit in your

- b. Symbolically, what is the value of the equivalent resistance?  $R_{eq} =$
- c. Redraw the circuit with the two resistors replaced with the equivalent resistance.

d. You now have one resistor connected directly across the battery. Find the voltage across and the current through this resistor. Write your answers in terms of  $V_{\rm in}$ ,  $R_{\rm I}$ , and  $R_{\rm 2}$ .

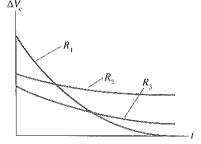

- e. Which of these,  $\Delta V$  or I, is the same for  $R_1$  and  $R_2$  as for  $R_{\rm eq}$ ?
- f. Using Ohm's law and your answer to e, what is  $V_{\text{out}}$ ? It's most useful to write your answer as  $V_{\text{out}} = \text{something} \times V_{\text{in}}$ .

 $V_{\text{out}} =$ 

g. What is  $V_{\text{out}}$  if  $R_2 = 2R_1$ ?  $V_{\text{out}} =$ 

#### 31.9 RC Circuits

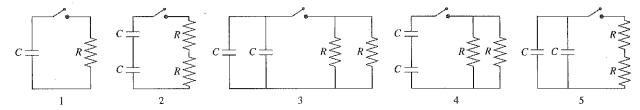

27. The graph shows the voltage as a function of time on a capacitor as it is discharged (separately) through three different resistors. Rank in order, from largest to smallest, the values of the resistances  $R_1$  to  $R_3$ .

Order:

Explanation:

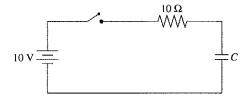

28. The capacitors in each circuit are fully charged before the switch closes. Rank in order, from largest to smallest, the time constants  $\tau_1$  to  $\tau_5$  with which the capacitors will discharge after the switch closes.

Order:

Explanation:

- 29. The charge on the capacitor is zero when the switch closes at t = 0 s.
  - a. What will be the current in the circuit after the switch has been closed for a long time? Explain.

b. Immediately after the switch closes, before the capacitor has had time to charge, the potential difference across the capacitor is zero. What must be the potential difference across the resistor in order to satisfy Kirchhoff's loop law? Explain.

c. Based on your answer to part b, what is the current in the circuit immediately after the switch closes?

d. Sketch a graph of current versus time, starting from just before t = 0 s and continuing until the switch has been closed a long time. There are no numerical values for the horizontal axis, so you should think about the *shape* of the graph.
